

PRO 9001 - Cat5e/6 receiver for UXGA video, Component HD, RGBs, S-Video and Composite Video, Stereo Audio, RS232 and Infrared

- Light weight aluminium enclosure
- Three video connections to your screen
- Infra-red control of PRO-9000 switch
- Full Duplex RS232
- Automatically adjusts for cable length and skew
- Up to 300m CAT5e/6 Cable

Note: The PRO-9001 receiver can only be used with the PRO-9000 switch.

General Description

The PRO-9001 receiver has an integrated video test pattern which compares the signal arriving over the CAT5 cable and automatically makes the necessary adjustments for video equalisation and skew, resulting in high quality pictures from almost any video source.

When different input signals are selected from the switch, the PRO-9001 will output the chosen video format via the appropriate connector and can even prompt your display to follow the video format via RS232. Switching can be achieved via RS232 or Infrared when using the PRO-9009 IR kit.
