

PRO 9010 – One-to-one CAT5e/6 extender kit for UXGA, Component HD, RGBs, S-Video, Composite Video and Stereo Audio

Compact light weight aluminum enclosures

- Accepts UXGA computer video, component HD and stereo audio
- Local signal outputs from transmitter
- Dual screen and dual stereo audio receiver
- Up to 300m CAT5e/6 cable

Note: The PRO 9010 is a kit which comprises 1x PRO-9702 transmitter, 1x PRO-9701 receiver and 2x power adapters. Cables must be ordered separately.

General Description

The PRO-9010 extender kit consists of a transmitter [9702] located at the source and a receiver [9701] located at the display. Typical applications include:

- digital signage applications where the high resolution output from a Digital Signage Player can be transmitted up to 300M over Cat5e/6 structured cabling to a remote display point
- relay of the UXGA/VGA output of a PC to a HD remote display video screen (illustrated)
- extending the HD component output of a satellite HDTV receiver or HD player to an HDTV viewing point up to 300M away.

The two parts can be purchased separately and used with other products within the PRO-9000 series, making this solution flexible and cost effect for many types of installations.
